Real analytic sets in Euclidean space (Le. , sets defined locally at each point of Euclidean space by the vanishing of an analytic function) were first investigated in the 1950's by H. Cartan [Car], H. Whitney [WI-3], F. Bruhat [W-B] and others.

semialgebraic geometry (an important topic in real algebraic geometry) and real analytic geometry respectively. It is Shiota s aim to recover from the above axioms alone most known properties of subanalytic sets (one loses Lojasiewicz inequality in its usual form, and one has to work with  $C^r$  differentiability,  $r$  positive integer,
